### Quest acquires ChangeBASE to speed adoption of latest Windows platforms, browser versions and virtualization technology

ChangeBASE

is now a part of

QUEST  
SOFTWARE®

As you may well have heard, **ChangeBASE is now a part of Quest Software**. The acquisition represents an expansion of Quest's product portfolio that allows companies to develop a user-centric management focus for their Windows application, desktop, mobile, and cloud environments. With this assembled portfolio of capabilities, Quest becomes a single source for helping organizations take advantage of technology changes to benefit both IT and users alike.

### Desktop to Cloud: Browser Migration in the Enterprise

[View the white paper here.](#)

Today, our way of working is also vastly different from what it used to be. As individuals, our lives, both professional and personal, are a mass of applications. We expect information to be at our fingertips, that we will be instantly gratified when we seek new knowledge online. Anything less than a real time return on our queries is fast becoming unacceptable.

On an organizational level, expectations are tending in a similar direction. Organizations are looking to access their 'mass of applications' through a web interface or browser; they may even be classed as a Cloud-based service such as Salesforce.com. Many will want to virtualize some of those applications, to provide such instantaneous access. And what does this all mean for the enterprise? Ultimately, that there is a deepening reliance on browser-based access to the corporate application estate.

Enabling this browser-based world brings its own unique challenges, never before encountered by the enterprise. This [white paper](#) will look at the three primary factors which

organizations need to consider when migrating to a new browser, and how those hurdles can be overcome. This will be discussed with specific reference to the latest browser version from Microsoft, Internet Explorer 9 (IE9), along with the benefits of deploying this new browser into the enterprise.

## **ChangeBASE launches VMware ThinApp plug-in for AOK VReady-It**

A few weeks ago, ChangeBASE announced the launch of its AOK VReady-It plug-in for VMware ThinApp.

With first look opportunities offered on the ChangeBASE stand at the VMworld Europe 2011 event in Copenhagen, this latest plug-in is designed specifically for VMware ThinApp v4.6 and enables organisations to convert their desktop MSI applications into the ThinApp format. This new functionality builds on the current capability of Quest's ChangeBASE solution set to automatically test and remediate applications for virtual compatibility, ensuring that they are ready for deployment to the VMware platform.

"The ThinApp plug-in for AOK VReady-It brings a new dimension to application virtualization. Organizations that are testing and remediating their applications for virtual compatibility clearly need to deploy those applications to their platform of choice. To be able to offer an automated solution to accelerate both of these aspects of ThinApp implementation really differentiates ChangeBASE from our competitors and to be able to announce this at VMworld Europe 2011 is phenomenal," commented Greg Lambert, Chief Technology Officer at ChangeBASE, now part of Quest Software.

## **Windows 7 Application Compatibility and Migration Webinar**

Join CDC Global Services' Andrew Carey and Greg Lambert of ChangeBASE to learn how easy it is to ensure application compatibility and accelerate your Windows 7 migration.

### **When?**

Thursday 17th November  
2:00pm EDT

Windows 7 brings a host of enhanced functionality and capabilities to organizations. To those responsible for its deployment, it can also raise concerns about application compatibility, and the time and resources required to migrate. Additionally, many organisations deploying IE8 may experience browser compatibility issues, such as the presentation and rendering of internal and external facing websites and portals.

During this one hour webinar you will learn about:

- The enhanced features and functionality of Windows 7
- How Windows 7 is helping global organizations achieve competitive advantage
- How to avoid unnecessary costs and reduce risk
- How you can sample test your application portfolio for Windows 7 compatibility in minutes
- How you can automatically remediate more than 95 per cent of application compatibility issues
- How to quickly identify IE8 compatibility issues
